1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1, 3-12, 14-18 and 20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Rejection grounds continue to be those set forth in the previous office action (Paper dated 8/28/07, paragraph 2).

3. Applicants' arguments filed on 10/18/07 have been fully considered but they are not persuasive.

Applicants, in his remarks, argues that:

(1) "Claim 1 is directed to an apparatus producing a **useful result** (e.g., the claimed multiplier provides a product of contents of first and second registers and the third register receives said product). Independent claim 10 recites a system including a computational apparatus similar to the apparatus of claim 1. Independent claim 18 recites a method features similar to claim 1. Accordingly, independent claims 1, 10 and 18 all fall within at least one of the enumerated statutory categories of 35 U.S.C. § 101 (i.e., a machine, article of manufacture, or process)"
(emphasis added).

With respect to the arguments, the examiner carefully reviews Applicant's specification, and claimed invention. Applicant hasn't pointed out how/why the claim produces a **useful, concrete, and tangible result**. If the claim as a whole is reasonably interpreted as just solving a mathematical algorithm rather than reciting a practical application of the algorithm which produces a useful, concrete and tangible result, then it would be non-statutory. The claims merely disclose elements / steps of performing

mathematical function. Therefore, the claims are not limited to a practical application of the mathematical algorithm because the result, a number, is not a real-world result. It is clearly that the invention as recited in the claims is not being applied to appropriate subject matter because the invention merely involves in calculations and manipulations of data in performing a mathematical operation. The claimed invention performs mathematical operation on a list of numbers to produce output results that are also numbers, in accordance with an algorithm, without a practical application for the invention to produce a useful, concrete and tangible result. The claimed invention clearly does not transform an article or physical object to a different state or thing. The result produced by claimed invention is merely number. It does not have a real world value since the claimed invention is not for any practical application, and thus is not useful. Therefore, the rejection is still proper.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
